	INSTITUT SUPERIEUR DES MATHEMATIQUES APPLIQUEES ET DE L'INFORMATIQUE DE KAIROUAN			
	Département	Département Informatique		
	Filière	Licence en Ingénierie des Systèmes Informatiques & Licence en Science Informatique (2ème Année)		
	Matière	Programmation Web		
	Année universitaire	2025/2026	TP8 : Mini CMS	Hédi Nsibi

Exercice :

🎯 Objectifs pédagogiques

- Manipuler **CRUD complet**
- Comprendre relation entre tables (FK)
- Implémenter **authentification**
- Créer un **mini site dynamique**

📁 1. Structure du projet

```
tp8_cms/
│
├── config/
│   └── db.php
│
├── auth/
│   ├── login.php
│   ├── register.php
│   └── logout.php
│
├── admin/
│   ├── dashboard.php
│   ├── add_article.php
│   └── add_category.php
│
├── frontend/
│   ├── index.php
│   ├── article.php
│
├── actions/
│   ├── add_comment.php
│
└── assets/
    └── style.css
```

🗄 2. Base de données

Création DB

```
CREATE DATABASE tp8_cms;
USE tp8_cms;
```

Table users

```
CREATE TABLE users (
    id INT AUTO_INCREMENT PRIMARY KEY,
    username VARCHAR(50),
    password VARCHAR(255)
);
```

Table categories

```
CREATE TABLE categories (
    id INT AUTO_INCREMENT PRIMARY KEY,
    name VARCHAR(100)
);
```

Table articles

```
CREATE TABLE articles (
    id INT AUTO_INCREMENT PRIMARY KEY,
    title VARCHAR(255),
    content TEXT,
    category_id INT,
    created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,
    FOREIGN KEY (category_id) REFERENCES categories(id)
);
```

Table comments

```
CREATE TABLE comments (
    id INT AUTO_INCREMENT PRIMARY KEY,
    article_id INT,
    user_id INT,
    content TEXT,
    created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,
    FOREIGN KEY (article_id) REFERENCES articles(id),
    FOREIGN KEY (user_id) REFERENCES users(id)
);
```

3. Connexion DB

📄 config/db.php

```
<?php
$conn = new mysqli("localhost", "root", "", "tp8_cms");

if ($conn->connect_error) {
    die("Erreur connexion");
}
?>
```

4. Authentification

register.php

```
<?php include("../config/db.php"); ?>

<form method="POST">
    Username: <input type="text" name="username"><br>
    Password: <input type="password" name="password"><br>
    <button>Register</button>
</form>

<?php
if ($_POST) {
    $username = $_POST['username'];
    $password = password_hash($_POST['password'], PASSWORD_DEFAULT);

    $sql = "INSERT INTO users(username, password)
VALUES('$username','$password')";
    $conn->query($sql);

    echo "Utilisateur créé";
}
?>
```

login.php

```
<?php
session_start();
include("../config/db.php");

if ($_POST) {
    $username = $_POST['username'];
    $password = $_POST['password'];

    $sql = "SELECT * FROM users WHERE username='$username'";
    $result = $conn->query($sql);
    $user = $result->fetch_assoc();

    if ($user && password_verify($password, $user['password'])) {
```

```
        $_SESSION['user_id'] = $user['id'];
        echo "Connecté";
    } else {
        echo "Erreur";
    }
}
?>

<form method="POST">
<input type="text" name="username">
<input type="password" name="password">
<button>Login</button>
</form>
```

5. Backend Admin

add_category.php

```
<?php include("../config/db.php"); ?>

<form method="POST">
    Nom catégorie: <input type="text" name="name">
    <button>Ajouter</button>
</form>

<?php
if ($_POST) {
    $name = $_POST['name'];
    $conn->query("INSERT INTO categories(name) VALUES('$name')");
}
?>
```

add_article.php

```
<?php include("../config/db.php"); ?>

<form method="POST">
    Titre: <input type="text" name="title"><br>
    Contenu: <textarea name="content"></textarea><br>
    Catégorie:
    <select name="category_id">
        <?php
        $cats = $conn->query("SELECT * FROM categories");
        while($c = $cats->fetch_assoc()) {
            echo "<option value='{$c['id']}'>{$c['name']}</option>";
        }
        ?>
    </select>
    <button>Ajouter</button>
</form>

<?php
if ($_POST) {
    $title = $_POST['title'];
    $content = $_POST['content'];
```

```
    $cat = $_POST['category_id'];

    $conn->query("INSERT INTO articles(title, content, category_id)
                  VALUES('$title','$content',$cat)");
}
?>
```

🌐 6. Frontend

index.php (liste articles)

```
<?php include("../config/db.php"); ?>

<h1>Articles</h1>

<?php
$result = $conn->query("SELECT * FROM articles");

while($row = $result->fetch_assoc()) {
    echo "<h3><a
href='article.php?id={$row['id']}'>{$row['title']}</a></h3>";
}
?>
```

article.php (détails + commentaires)

```
<?php
session_start();
include("../config/db.php");

$id = $_GET['id'];

$article = $conn->query("SELECT * FROM articles WHERE id=$id")-
>fetch_assoc();

echo "<h1>{$article['title']}</h1>";
echo "<p>{$article['content']}</p>";
?>

<h3>Commentaires</h3>

<?php
$comments = $conn->query("SELECT * FROM comments WHERE article_id=$id");

while($c = $comments->fetch_assoc()) {
    echo "<p>{$c['content']}</p>";
}
?>

<form method="POST" action="../actions/add_comment.php">
    <input type="hidden" name="article_id" value="<?php echo $id; ?>">
    <textarea name="content"></textarea>
    <button>Commenter</button>
</form>
```

7. Ajouter commentaire

📄 `actions/add_comment.php`

```php
<?php
session_start();
include("../config/db.php");

$content = $_POST['content'];
$article_id = $_POST['article_id'];
$user_id = $_SESSION['user_id'];

$conn->query("INSERT INTO comments(content, article_id, user_id)
              VALUES('$content', $article_id, $user_id)");

header("Location: ../frontend/article.php?id=$article_id");
?>
```

🎨 8. CSS simple

📄 `assets/style.css`

```css
body {
    font-family: Arial;
    margin: 20px;
}

h1 {
    color: #2c3e50;
}

form {
    margin-top: 20px;
}

input, textarea {
    display: block;
    margin-bottom: 10px;
}
```

9. Étapes à suivre (IMPORTANT)

1. Installer XAMPP / WAMP
2. Créer la base de données
3. Copier le projet dans `htdocs`
4. Lancer Apache + MySQL
5. Accéder à :

```
http://localhost/tp8_cms/frontend/index.php
```

🚀 Résultat attendu

L’étudiant doit obtenir :

- ✅ Inscription / connexion
- ✅ Ajout catégories
- ✅ Ajout articles
- ✅ Affichage articles
- ✅ Ajout commentaires
